PROFESSIONAL PROFILE

Computer Science graduate with a 2-1 BSc Honours degree from Aston University. Passionate about software development and utilising my growing knowledge of coding languages and project management skills, to solve complex problems and build value-added digital solutions. Experienced in developing web applications, motion graphics and programs through university and personal projects.

My ADHD brain fuels my ability to be an innovative problem-solver, learn new technologies and skills quickly, be hyper focused on what matters and thrive in fast-changing technical and project environments.

EDUCATION

BSc (Hons) Computer Science | Aston University | 2023–2026

Grade: Two-One Class Honours (66.6%)

Final Year Project: Dungeon Masters Assistant	Impactful Modules:
Created an application that facilitated the automation and streamlining of multiple parts of the Dungeons and Dragons experience, including character creation, note taking and dice rolling	• Internet Applications & Database Design • Computer animation • Individual project • Professional and Social Aspects of Computing • Mathematics for Computing Professionals
The application was built using the unity engine, programmed with C# on the unity side, whilst the backend incorporated JavaScript and PHP to send/retrieve data to and from the database which stored the player information.	
The assets, excluding some materials and fonts were all created in blender and clip studio paint	

University Technical Colleague Reading | Extended BTech Computer Science | 2021 – 2023

Grades: Distinction* Distinction* Distinction

Achievements

First prize in CISCO project day competition – Part of 4-person team that developed collaboration app. The concept was similar to Microsoft Teams and added several features that would add improved user experiences that the commercial tool.

University Technical Colleague Reading | 8 GCSE and BTech Engineering | 2019 – 2021

Grades: English Language (7), Maths (7), English Literature (7), Chemistry (7), Biology (7), Physics (7), 3D Art (7), Computer Science (7), Engineering BTEC (Merit)

TECHNICAL SKILLS

Programming Languages	Web Development	Databases	Other
Python – Intermediate	HTML 5 – Intermediate	MYSQL – Intermediate	Git/GitHub – Intermediate
Java – Intermediate	CSS – Intermediate		JSON – Foundation
JavaScript – Intermediate	PHP – Intermediate		
C# – Foundation			

KEY PROJECTS

Internet Application and Database Design (Year 1) Grade: 69%

HTML5 | CSS | JavaScript | PHP | SQL

Created a website to support the creation, detailing and managing of the progress of multiple projects.

- The website allowed users to create and login to their own account and create, view and edit projects they were associated with.
 - This website was connected to a SQL database which was updated via JavaScript and PHP.
 - A key part of the project was to ensure the website was secure against cyberattacks. Extensive testing was carried out to ensure the preventative measures I implemented against threats, such as SQL Injection, were effective.
-

E-Commerce Web Application (Year 2) Grade: 71%

HTML5 | CSS | JavaScript | MongoDB | JSON

Worked as part of a team of four, to collaboratively design and develop a faux online jewellery shopping platform, that allowed users to set up an account to browse and keep track of all their product purchases.

- MongoDB was selected and installed as our database software, used to store both customer information and project data, as the team felt this was the best option to support the websites functionality.
- Created bespoke website UI assets to enhance the appearance of the website design.
- I was one of the front-end developers for this group project and was responsible for the product page and checkout page. Along with this, I assigned individual and joint tasks to members of the team and ensured each deliverable was completed to satisfaction and that sufficient time was allotted for development reviews and testing.

Game Development Project (Year 3) Grade: 72%

Unity | C# | JSON

Created a functional demo of a factory style cooking game, incorporating custom 3D and 2D assets. This game involved managing the needs of a restaurant, while serving as both the chef and server through automating the various processes involved.

- Created a comprehensive game design document to outline the key features of the design, such as the gameplay loop, win conditions and fail states, along with outlining how the gameplay meets the design considerations outlined in the brief.
 - Developed using a unity engine and assets were created through clip studio and blender as I felt using unity store assets was too impersonal for my design considerations.
 - Incorporated a working gameplay loop and the ability to save and load progress across sessions.
 - The build required in-depth testing to find and fix bugs encountered during the project development.
-

Animation Project (Year 3) Grade: 76%

Blender

Used Blender to create a bespoke 2-minute-long animation, incorporating all of the skills taught throughout the animation unit along with my own extracurricular research and practice to create an animation about a prisoner trapped beneath a mountain.

- Used shader nodes to create advanced materials such as realistic brick and concrete, along with Compositing to create bloom effects for more customised lighting.
 - Utilised sculpting on certain objects such as the heart and lungs to make the design look more true to life, along with keyframing to make them perform their functions.
 - Used constraints on the camera to better control its movements while not having it “stutter” as it would with simple keyframe based movement.
-

INTERESTS | ACTIVITIES

- 2D and 3D digital illustrations and animations
 - Cooking
 - Indoor Bouldering
-
